

Hybrid Cloud Security Management

Visibility into and control over Cloud Services, including AWS and OpenStack Platforms

The Challenge: Reconciling Business & Security Within a Hybrid Cloud Environment

Organizations continue to rapidly adopt cloud-based services — in particular AWS and OpenStack — driving demand for solutions that allow for management of related network security controls. With the end-user organizations ultimately responsible for oversight of security management, rather than cloud service providers themselves, practitioners require advanced capabilities to address their evolving cloud deployments.

The Solution: Intelligent Security Management

Intelligent Security Management from FireMon is the industry's only solution offering comprehensive analysis and reporting of network security configuration change for both the AWS and OpenStack platforms.

Support for Real-world Hybrid Architectures

With the ability to provide detailed visualizations of both traditional and cloud-based controls, along with detection and reporting of related firewall rule changes, FireMon supports today's real-world hybrid enterprise architectures. Among the specific capabilities FireMon Security Manager provides in support of AWS and OpenStack are:

- Centralized, integrated security infrastructure analysis across traditional and cloud-based network controls from a single pane of glass
- Detailed policy visualization for VPC and Tenant instances, as well as configuration change notification for AWS and OpenStack environments
- Ongoing audit and validation of related network security policies, including for required standards compliance (e.g., PCI DSS)
- Verification of rule set and policy conformity with established network security best practices

CLOUD SECURITY FEATURES

KPI DASHBOARD

See your network at a glance with analysis, trending and key performance indicator widgets on your dashboard.

CHANGE DETECTION

Isolate, document and when necessary, alert every ongoing change implemented throughout your existing firewall policies.

PCI DSS COMPLIANCE

Expanded compliance auditing and automated workflow for rules re-certification that address new PCI DSS requirements.

Who is FireMon?

FireMon solutions deliver continuous visibility into and control over network security infrastructure, policies, and risk. Using the FireMon Security Intelligence Platform, today's enterprise organizations, government agencies, and managed services providers dramatically improve effectiveness of network defenses, optimizing investments and speeding response to changing business demands.
