

INTELLIGENT SECURITY MANAGEMENT

Delivering next-generation security management that boosts productivity and accelerates the agility of business

THE CHALLENGE: REDUCE BREACH EXPOSURE AND IMPROVE OPERATIONAL EFFICIENCY

For years, organizations have invested money into hiring more staff and acquiring new defense technology. And yet, network data breaches are at an all-time high with average costs of \$4 million per breach. The investment in staff and technology may even be working against organizations, creating complex infrastructures and processes that are increasingly difficult to manage.

THE SOLUTION: INTELLIGENT SECURITY MANAGEMENT

Security breaches are not the result of an investment, technology or staffing problem. They're due to ineffective security management. With hundreds of thousands of network events per hour, daily firewall rule changes, ongoing upgrades, increasing policy complexity and compliance fire drills, it's not hard to see how security management is more complex than ever.

Intelligent Security Management from FireMon enables teams to work smarter, not harder, applying intelligence to the entire security program – from prevention to detection. We provide organizations with the visibility, proactivity, agility, and metrics required to make security a business enabler, rather than a bottleneck.

Visibility	Proactivity	Agility	Metrics
Infrastructure-independent single-pane monitoring & analysis	Anticipating needs and simulating impact for risk mitigation	Advanced automation with context-aware workflows	Security intelligence you can measure and share

Driving this solution are benchmarking, simulation and analysis capabilities that arm teams with the information required to intelligently:

Manage Multi-Vendor Firewall Environments

Clean Up & Audit Firewall Policies

Assess & Report on Policy Compliance

Intelligently Automate Policy Changes

Migrate or Upgrade Firewalls

Manage Vulnerability & Risk

Triage Security Alerts

Proactively Search for Threats
