

Keep It All Connected

Eliminate disruptions while removing security risks

THE CHALLENGE: Keep the business connected, make everything secure.

Networks change. That's just what they do. Security teams experience a backlog of change requests, new apps to deploy and users that need foolproof security and connectivity.

Every change to the network can enable (or bring down) critical business applications. A single misconfigured security device can disrupt customer orders, medical records, manufacturing operations or credit card processing. Executing changes must be flawless. Every. Single. Time.

Specific challenges include:

- Applications play host to countless vulnerabilities
- DevOps and agile delivery have apps flying into production
- Partners, suppliers and customers expect constant digital interaction
- Manual changes don't keep pace with a hyperspeed economy

THE SOLUTION: Automated Security with Total Interoperability

FireMon removes the risk of misconfigurations leading to disruptions and threat exposures. Vulnerabilities are prioritized with simulation, changes have perfect precision with end-to-end automation, and compliance becomes a constant in an ever-changing network.

The enterprise stays connected in a world seemingly designed to throw you off, because with FireMon you get deep integrations into security devices, interoperability with business systems (like ITSM and GRC), traffic flow analysis with application and user behavior and seamless change orchestration across the global enterprise.

WHY FIREMON?

Real-Time Monitoring instantly reveals what's happening on the network, alerting you to changes that can cause disruption

BPMN Integration ensures fully automated workflow integrations from request and design to implementation and decommissioning

Continuous Compliance made possible with 350+ controls that you can tailor to your specific – internal and regulatory – compliance needs

Traffic Flow Analysis

Only FireMon allows you to see the effects of every rule across the enterprise - down to the application and user - with associated rule recommendations that meet your business and security goals.

Log Analysis

With FireMon's open APIs, you're connected to all data – EDR, AV, DLP, Firewalls, Packet Capture, Apps – leaving nothing hidden and automating actions to restore continuity.

SOLUTION OVERVIEW

FireMon keeps businesses connected, applications available and users productive with sub-second policy orchestration. Now, you have the capabilities needed for total security, reducing risk without compromising network access and business continuity.

Real-time monitoring gives you instantaneous knowledge of network and application behavior, alerting you when trouble is on the horizon and orchestrating changes in seconds to mitigate risk and disruptions.

Elasticsearch

delivers high throughput data ingest, unrivaled search speed and flexibility to adapt to business changes and application needs.

Risk Analysis

combines vulnerabilities with network policy, simulating attack paths to quantify risk and mitigate disruptions.

Automated Rule Push

commands security for your network and app connections with stupefying speed, responding with corrective security controls in seconds.

IPv6 Support

as application and data types evolve, only FireMon has the architecture ready to adapt to your requirements, including IPv6.

Automated Decommissioning

as users and applications change, automatically remove outdated and unused rules with zero human touch.

Who is FireMon?

The FireMon platform delivers continuous security for hybrid enterprises through a powerful fusion of vulnerability management, continuous compliance and orchestration. Since creating the first-ever network security management solution 15 years ago, FireMon solutions have continued to deliver visibility into and control over complex network security infrastructure, policies and risk to over 1,500 customers around the world.

Using the FireMon platform, today's leading enterprise organizations, government agencies, and managed security providers have dramatically improved effectiveness of network defenses, accelerating business agility optimizing return on investment.
