

Have You Outgrown Tufin?

Don't settle for poor performance, limited search capabilities, and customer support that borders on neglect

Can't scale. Can't Perform. Can't Search.

We regularly hear from organizations that Tufin can't keep up with their growing and increasingly complex environments. As more and more policies are added, cumbersome workarounds and inflexible search tools slow system response times making reporting and alerting nearly impossible.

Lack of commitment to customer success after the sale.

Good luck with getting any attention from Tufin unless it's time to renew. We've heard time and again that Tufin rarely provides anything but the most basic of support services and is quick to close support tickets, even if they're unresolved.

It's their way or the highway for workflows, reporting, and compliance controls.

Customers tell us that Tufin's platform is rigid, forcing them to adapt to Tufin's way of doing things instead of fitting to their specific needs. Any customizations for workflows, reporting, controls, and integrations need to be done by Tufin developers and professional services teams adding 40% or more on top of software costs.

Sound familiar? If it does, it's time for an enterprise-grade security policy management platform that will grow with your needs without outpacing your budget.

It's painfully slow. Even though we are allocating more than the recommended VM specs, the system still crawls. Larger reports or queries take hours to finish, if at all. The system is constantly unstable. It's more apparent as we add firewalls and have more users logged-in.

Tufin customer

Say Goodbye to Tufin and Hello to FireMon

With FireMon, you get a time-tested platform that's years ahead of Tufin in reliability and stability with:

- Verified scalability & performance with every release certified to support 15,000 devices, 25 million rules, and sub-10-second response times

Many FireMon customers routinely manage more than 20,000 firewalls and other network security policy enforcement points

- SIQL (Security Intelligence Query Language) search that powers flexible, granular, and highly customizable queries in real-time across the entire FireMon platform
- An API-first approach that uses a modular plug-and-play framework for easy integrations into SIEM, SOAR, XDR, vulnerability scanners, and ITSM systems
- Fully customizable reporting, analytics, assessments, and dashboards using over 500 built-in checks and nearly limitless additional ones using SIQL and REGEX query-based controls
- A world-class support team to get you quickly up and running then is at your side along the journey to achieve business outcomes and maintain operational readiness
- Ongoing education, annual health and architectural reviews, product alerts, value engineering workshops, roadmap updates, and executive outreach ensures business objectives are being met along with your security needs

It's time to talk to FIREMON.

FireMon's mission is to improve security operations that will in turn lead to better security outcomes. FireMon delivers industry-leading security policy management, cloud security operations, and asset management solutions. Our platform is the only real-time solution that reduces firewall and cloud security policy-related risks, manages policy changes, and enforces compliance. FireMon's Cloud Defense solution (formerly DisruptOps) is the only distributed cloud security operations offering that detects and responds to issues in the fast-paced public cloud environments. Our cloud-based Asset Management solution (formerly Lumeta) scans entire infrastructures to identify everything in the environment and provide valuable insights into how it's all connected.

FireMon Customers Say it Best

FireMon SIQL enables us to build analytics to use our data to gain superior insights quickly. Tufin was like 'find' in MS Word where FireMon is like Google.

Tufin was pushing us to a subscription model 45 days from our renewal. FireMon offered a faster path to value with a no risk 60 day guarantee that my CFO loved.

FireMon got us implemented and fully functional in less than 30 days. We were with Tufin for 3 years and never felt fully deployed.

FireMon's Open Orchestration API has allowed us to integrate deeply into our change process, saving over 500 resource hours each month.

It's Easy to Flip that Switch

Many Tufin customers have already made the switch to FireMon. We'll be happy to demonstrate to you how quickly FireMon's flexible, agile, and scalable platform can solve your top security policy management use cases. Our professional services and dedicated customer support managers are at the ready to help make a seamless transition, and right now we'll fast-track you into production to speed deployment even further.

If you're tired of the headaches of Tufin, there's never been a better time to switch to the industry leader. **Switch to FireMon today.**

** Terms and conditions apply.*
